Advanced Phytoplankton Monitoring in Ocean Research

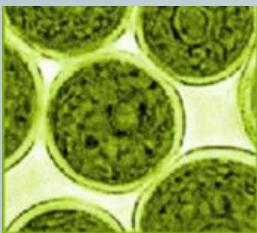

Tobias Boehme

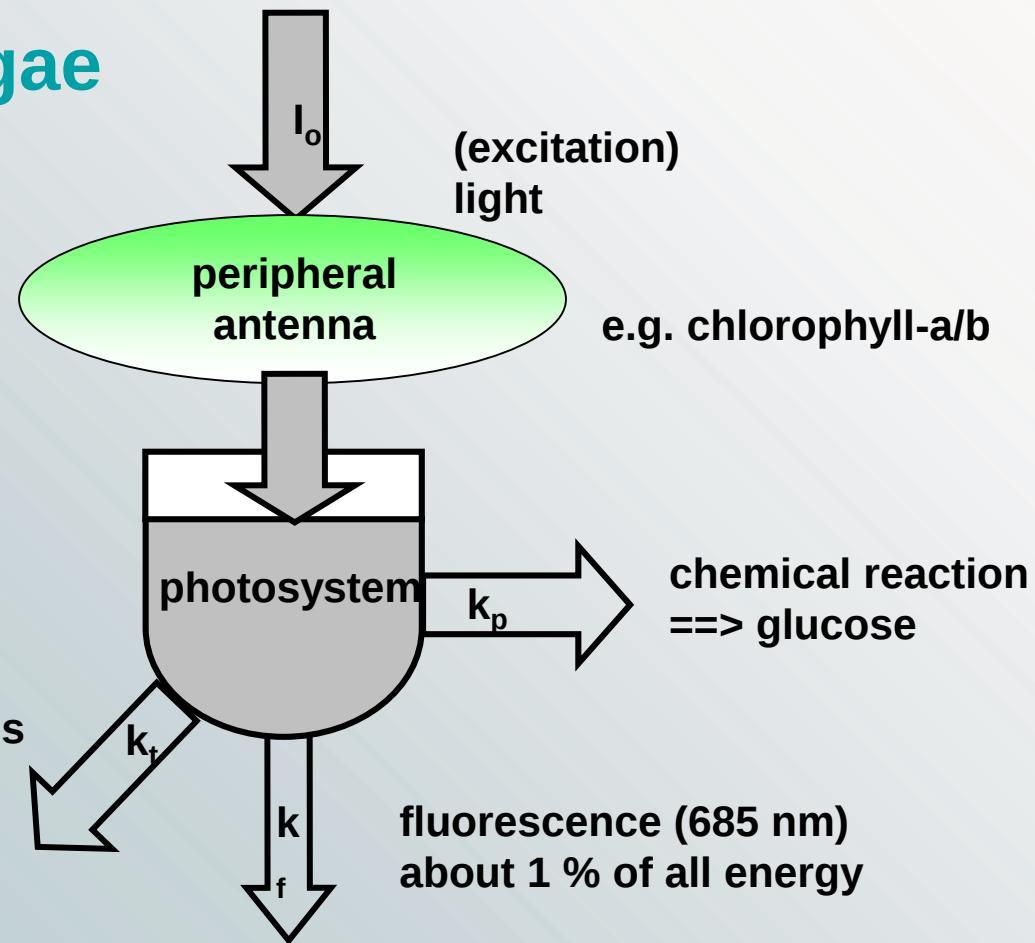

Photosynthesis of algae

sunlight

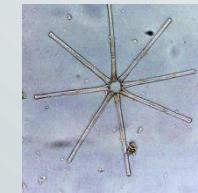

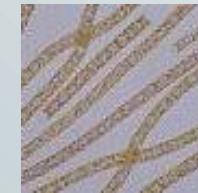

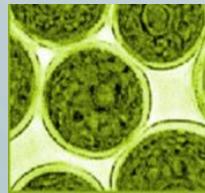

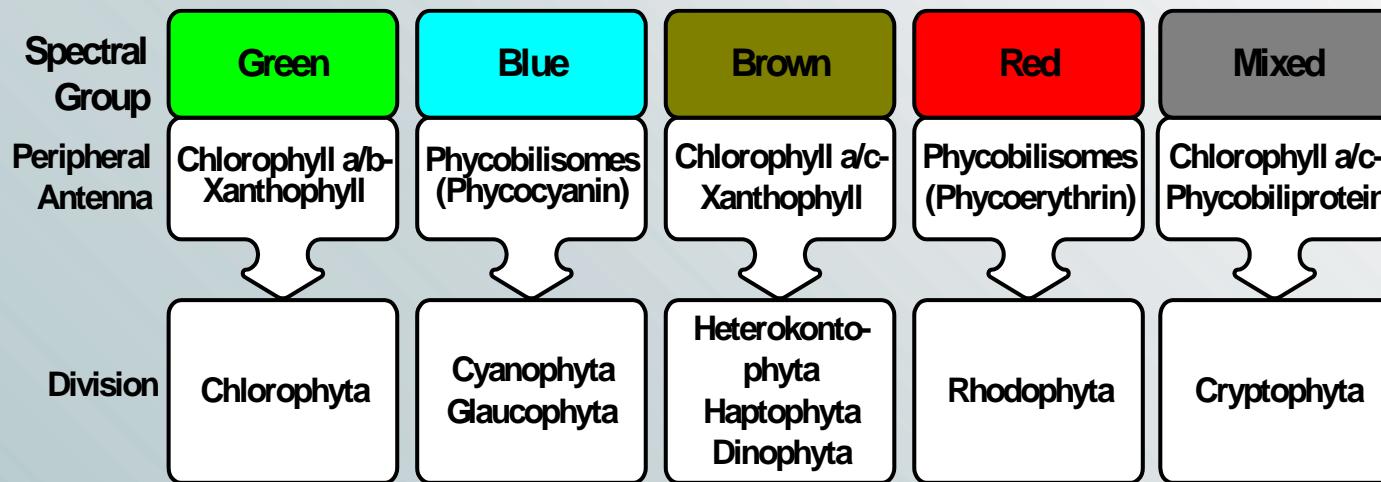

thermal loss

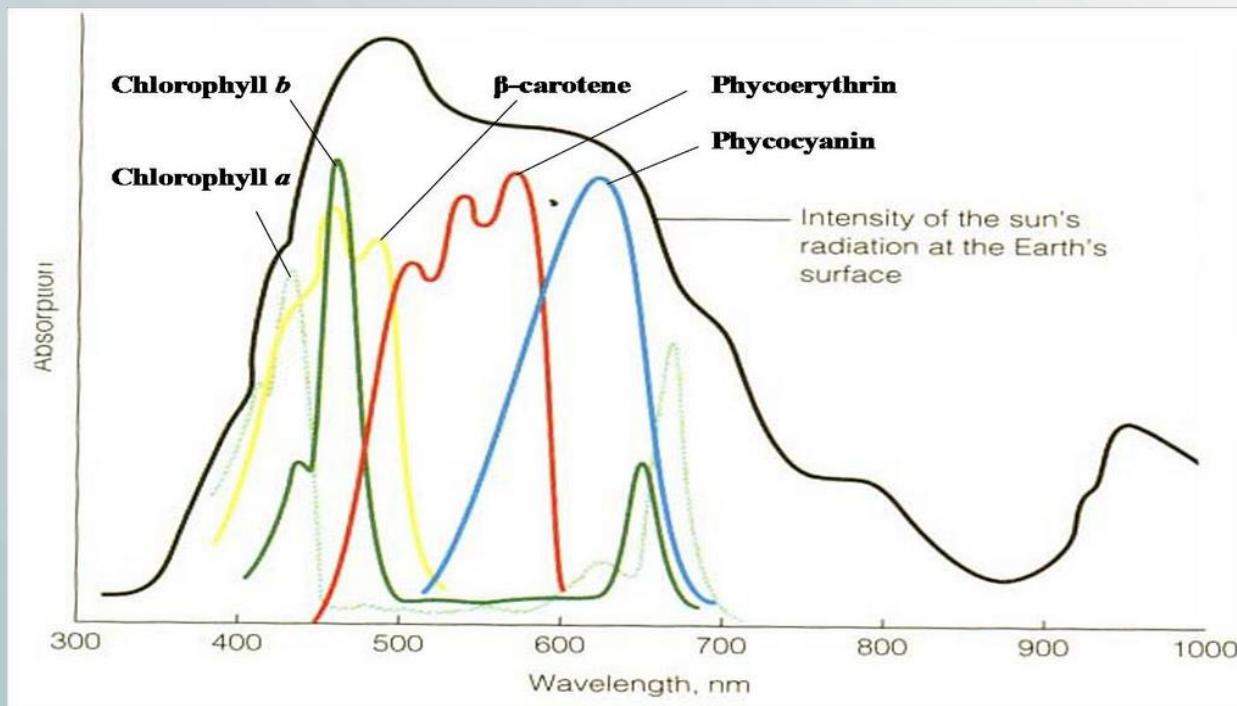

Spectral groups of phytoplankton

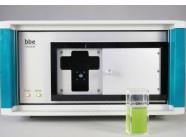

Algal pigments and their relation to taxonomical algae classes

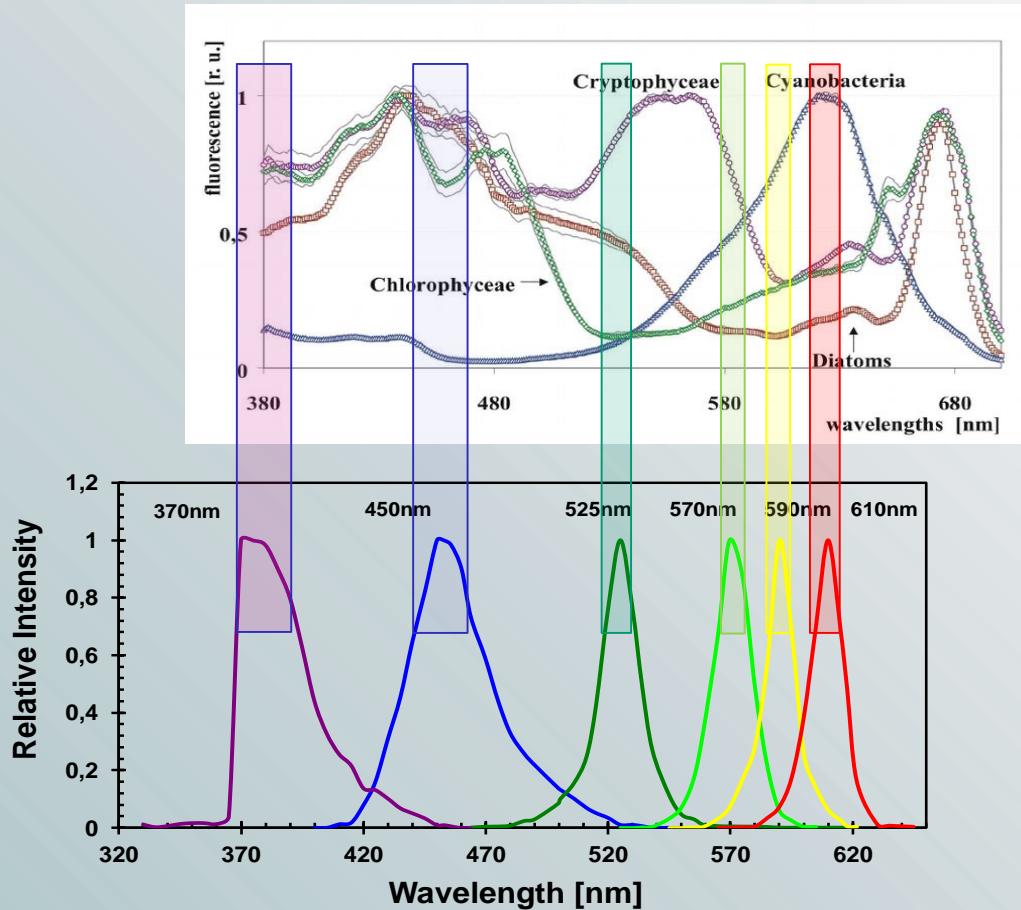

Sun spectra and absorption spectra of the different pigments

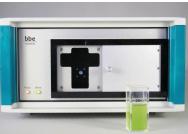

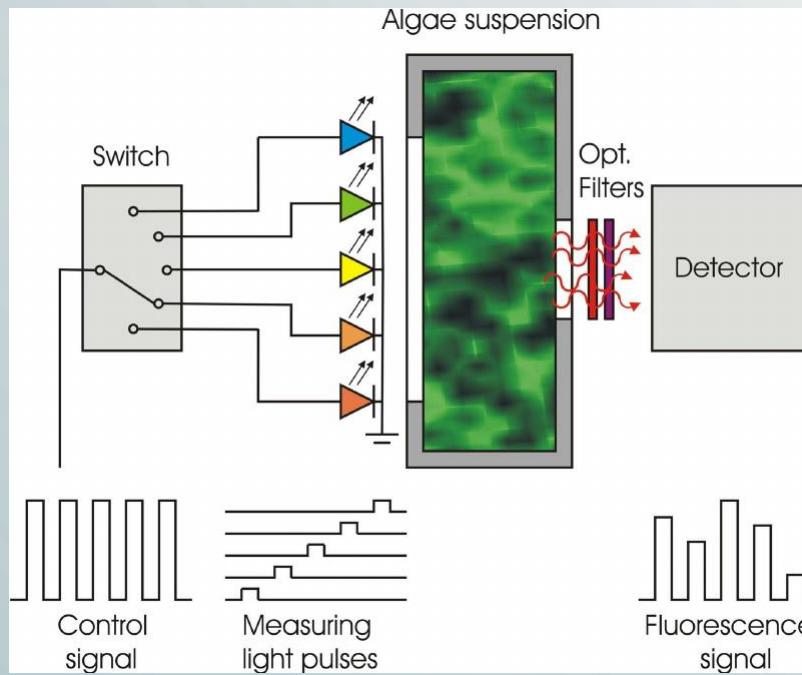

Excitation spectrum, fluorescence measured at 700 nm

Spectra of the
LEDs, used in
the bbe
instruments

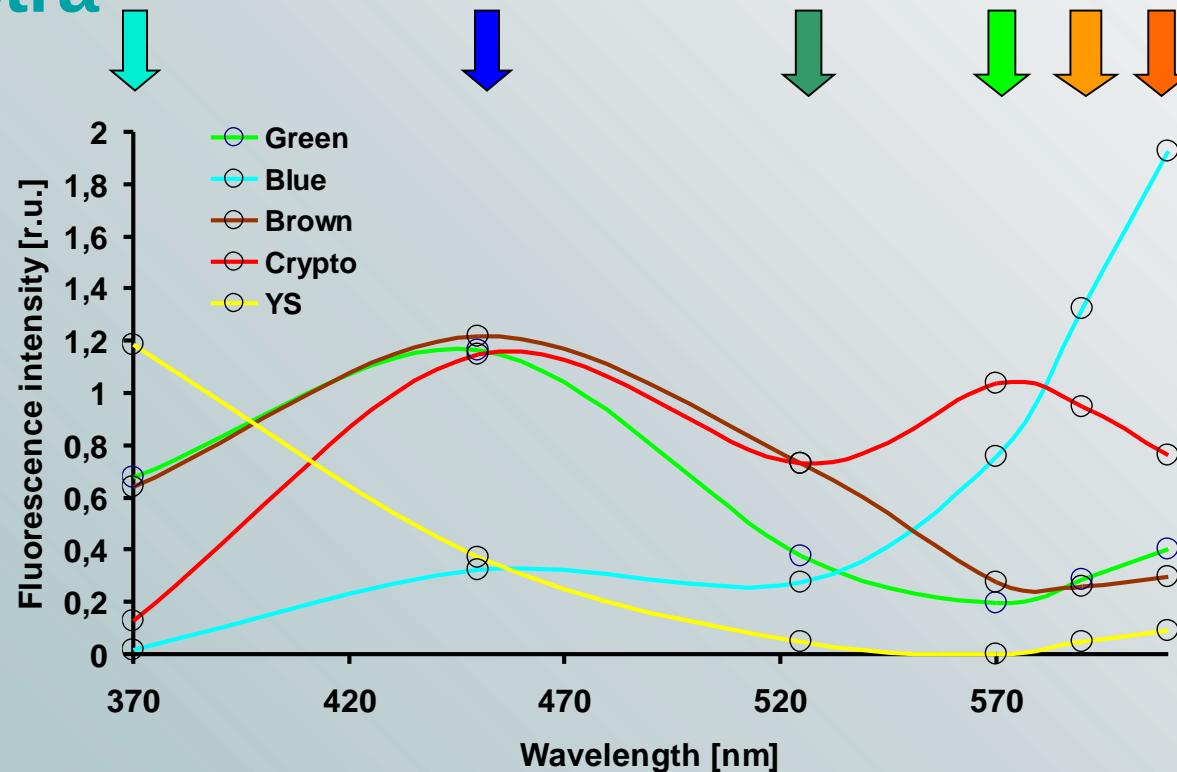

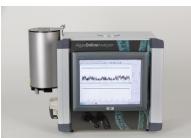

Principle of the measurement

Principle of the fingerprint with norm spectra

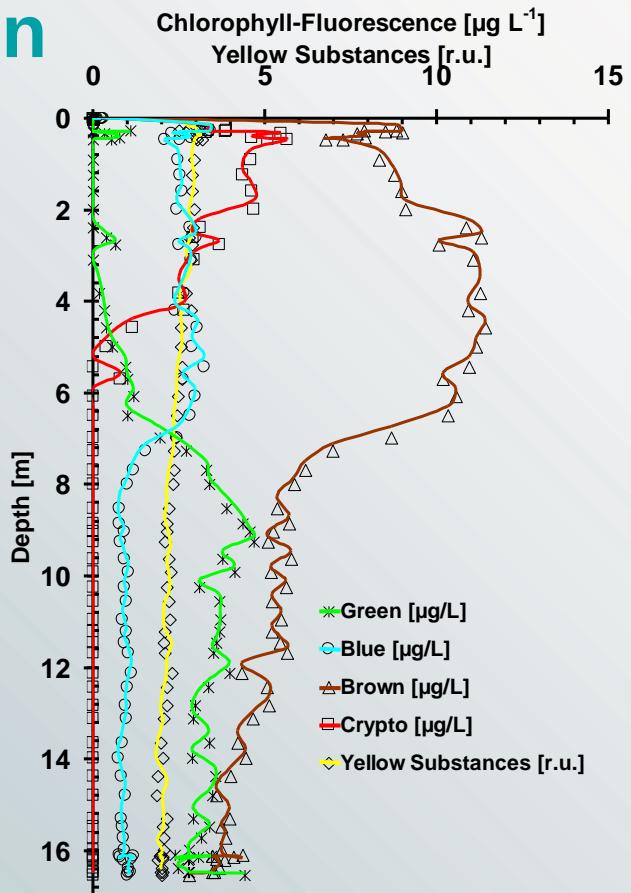

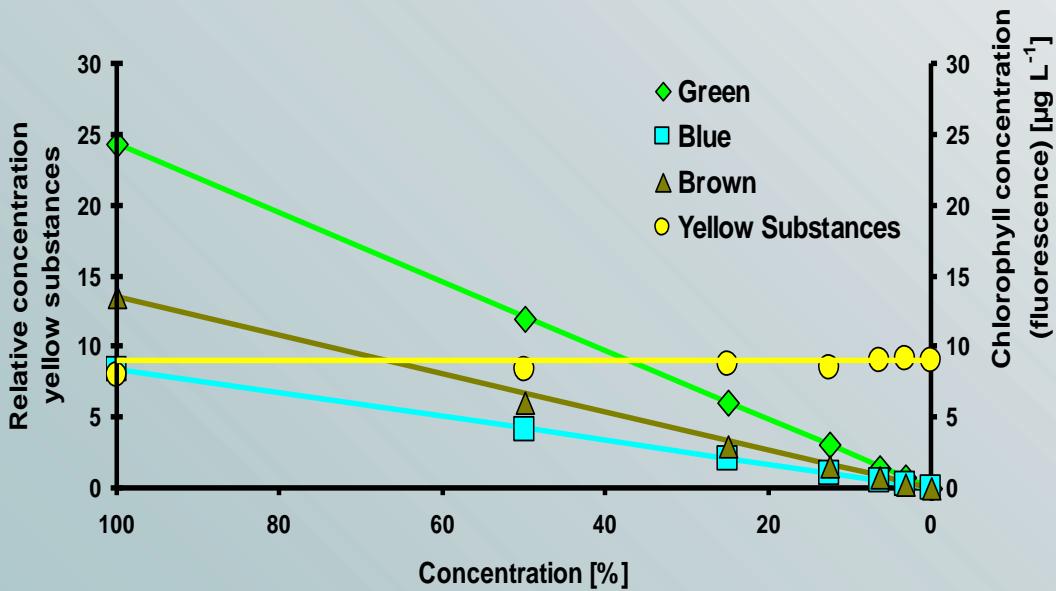

Calibration with real algae

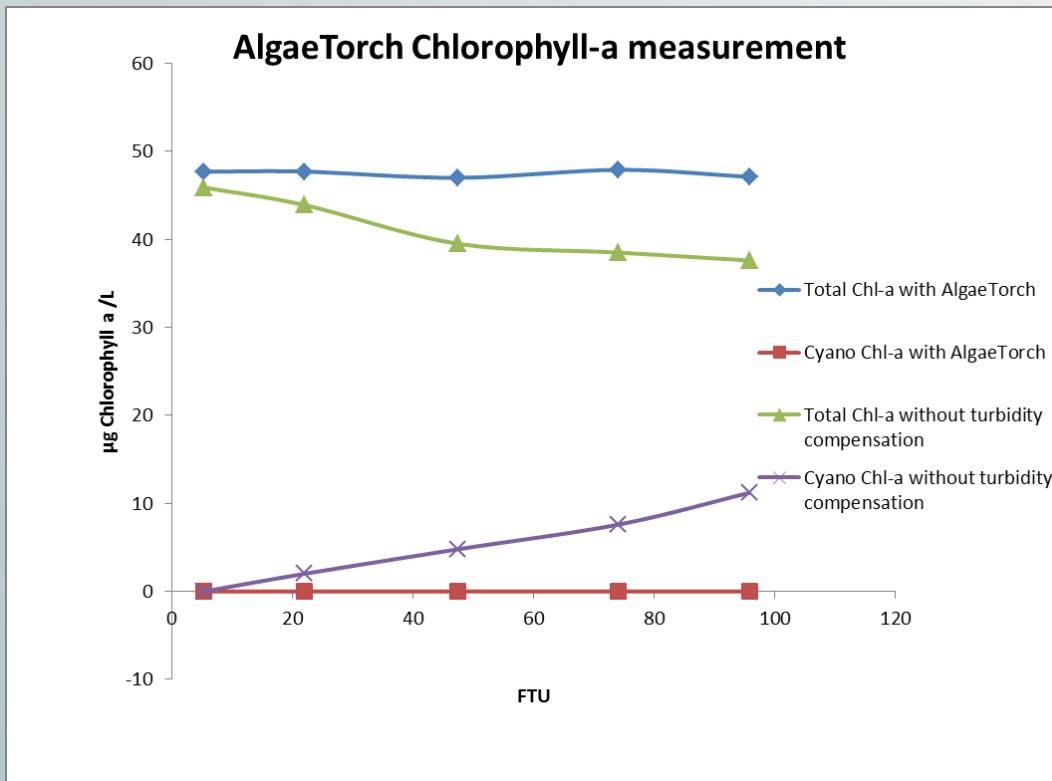

Yellow substances correction

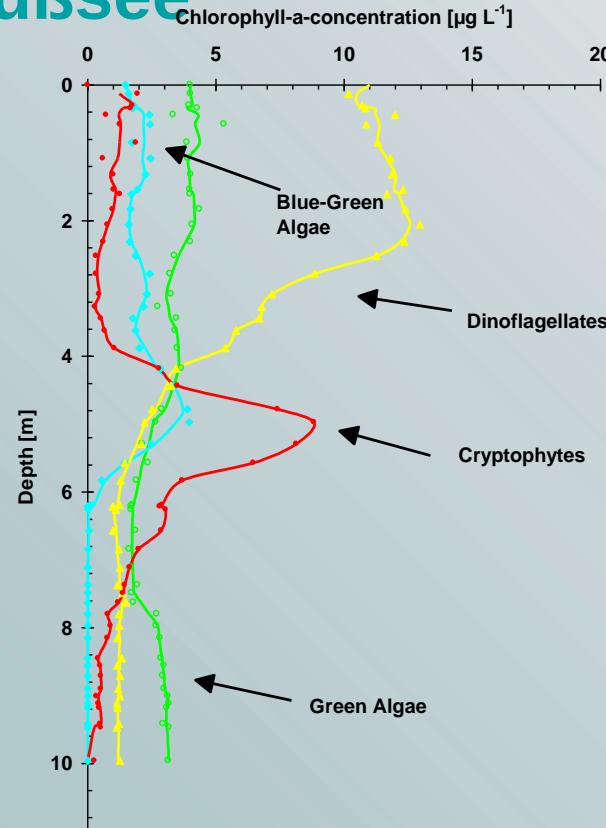

Turbidity correction

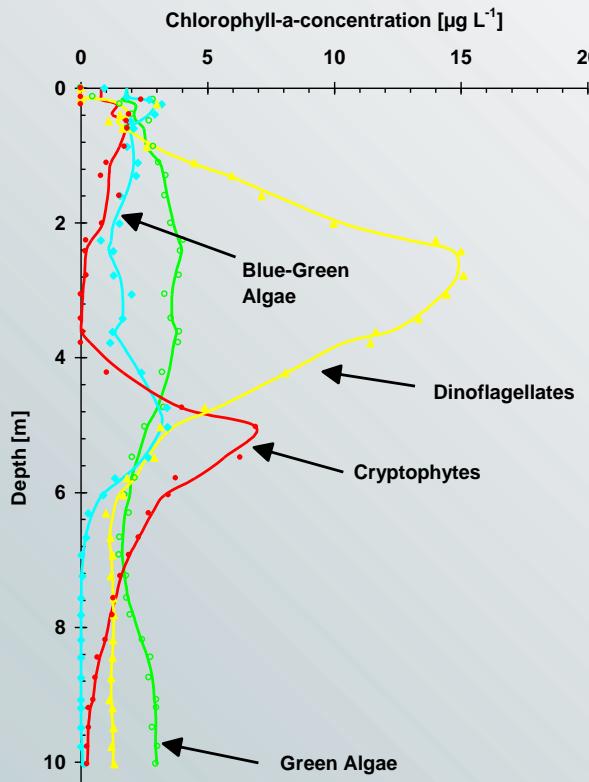

Migration of Dinoflagellates in Eutrophic Plußsee

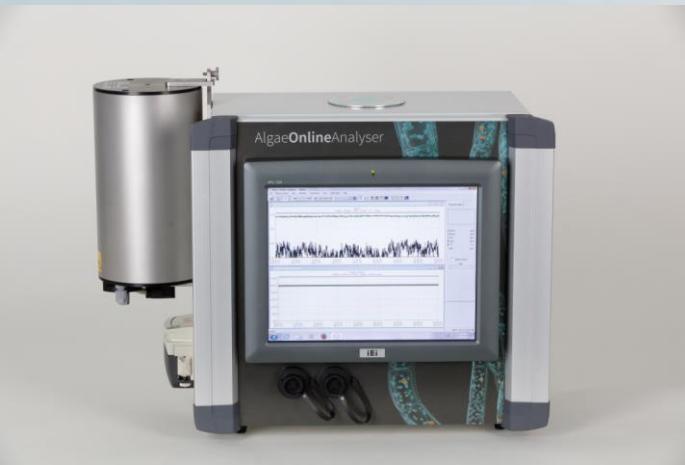

9:30 am

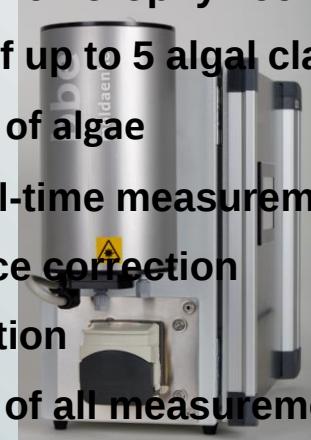

2:00 pm

bbe Algae Online Analyser

- determination of chlorophyll concentration
- determination of up to 5 algal classes
- optional activity of algae
- continuous, real-time measurement
- yellow substance correction
- turbidity correction
- graphic display of all measurement values

Used for Ferrybox applications

Algae Online Analyser applications

HZG Container at the river Elbe

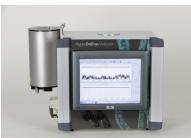

biological - biophysical - engineering

bbe Algae Online Analyser applications

-4H- Ferrybox on the research vessel Thalassa (Ifremer)

Algae Online Analyser applications

-4H- PocketFerrybox Ifremer Boulogne-sur-Mer

biological - biophysical - engineering

bbe
moldaenke

Algae Online Analyser applications

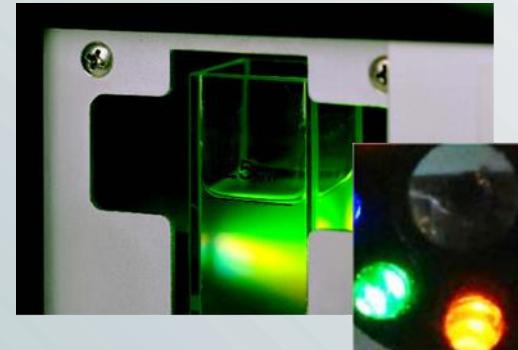

-4H- FerryBox at the RV Burchana (NLWKN)

Algae Lab Analyser

- chlorophyll determination
- algae class differentiation
- activity of algae
- measuring range: 0-200 µg/l
- 12V battery connection

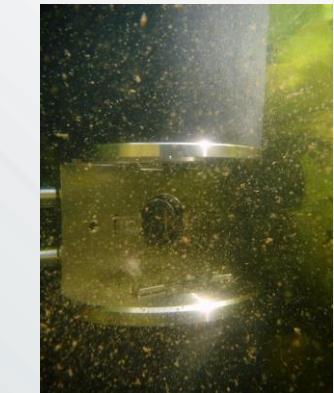

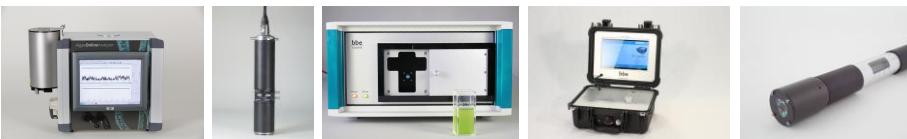

biological - biophysical - engineering
